Roughly, Marketing Channels are classified into two categories in every country.
Direct Selling from Farmers to Consumers
(This cannot become majority of marketing)

Farmers Market (Far from consumers)

- Rare Purchases
- A lot of transportation cost
- Risk: Farmers have to withdraw unsold products by their own cost.

Cheap

Risk: Can farmers ensure payment from consumers?

Through Delivery Service

Near to Consumers

Expensive

Risk: Can consumers receive same products as products explained in advance?

Small lot transportation requires high cost even through Internet linkage

Risk; Farmers have to withdraw unsold products by their own cost.
Contract Farming between Farmers and Buyers (Retailers, Processors)
(Only Contract Farming cannot solve all marketing problems)

Only Contracted Amount

If over production occurs, farmers have to sell their surplus to other buyers or throw away them. If shortage occurs, farmers have to receive penalty.

Many Risks on implementing the contract for both sides

If higher price in market than the contracted price, farmers often sell the products to other buyers.

We can identify many cases of failed contract farming. It is difficult to realize successful contract farming due to fluctuating production. Successful cases could be realized on strong mutual credibility and special commodities such as medicinal plants.

It is not easy for small farmers to join this farming without groups.
Even Normal Contract Farming always requires surplus products to be sold outside the contracts.

In order to ensure consistent supply to buyers (processors), farmers always have to produce more products than the contracted amount in order to avoid products shortage, because all kinds of products production fluctuate under changing weather condition.

If shortage of contracted products actually happens, big penalty will come to farmers. As a result, farmers have to sell the surplus to other buyers or markets at lower price every time. This would add more cost to contract farming for farmers. This cost could not be ignored in the management.

Primarily fluctuating fresh products are not suitable for contract farming.

We can identify many failed cases of contract farming due to the above risks and additional cost.
Farming by Japanese Agricultural Corporation is increasing in Asian countries. This farming has strengths such as high quality and safe products by using Japanese techniques and materials.

Salad Bowl
They produce strawberry and tomatoes in green houses in collaboration with Vietnam food companies in Vietnam. (Lam Dong)

GRA
They produce Strawberry in green house by using ICT in India. NEC supported this.

Wago-En
They produce banana& mango for exporting to Japan and vegetable for supermarkets and Japanese restaurants in Thailand.

Nanaya
They produce vegetables by applying GAP in Cambodia by using ICT.

Japan Farm Products (Cambodia)
They produce vegetable with farmers groups on basic contracts and sell primarily processed vegetable to supermarkets and restaurants through distribution place.

Farm Doo
They produce organic vegetable such as tomato & cucumber in Myanmar.

Green Stamp Produce
They produce Okura in Philippines

Kurata Pepper
They produce pepper and processed pepper in Cambodia.
Establishing high end value chain in big cities of ASEAN countries

US$14.5/5kg
Japonica Rice
Produced in Anjiang Province Vietnam by ANJIMEX KITOKU (Joint Company between Japan and Vietnam)

@ AEON Phnom Penh    August 3, 2016

JFP vegetables are sold at higher price in AEON Phnom Penh. They are produced by Cambodian farmers under special condition set by Japan Farm Products (Safety, Fresh, Well packed) (Pesticide residue checked in Japan)

We can identify similar examples in Yangon (G-7 Agri & City Mart), HCM, Bangkok, Jakarta super markets.
This **could benefit small scale vegetable farmers** near big cities.
Thai Fresh Products Marketing

- **Agricultural Cooperatives (AC)**
  - Loan
  - Integrator Companies (Middlemen)
  - AC Member Farmers
  - Local Wholesale Market

- **Farmers or Farmer Groups**

- **Talaad Thai**
  - (Consumption Area Market)
  - Retail Markets
  - Export

- **Export**

- **Consumers**
Roles of Major Stakeholders in Thailand

- **Talaad Thai**: Wholesale Market collecting all kinds of fresh products including vegetable, fruits, flower, fish, and meat from normal grade to high grade. (12,000 ton/day traded) Trading; No auction, one to one negotiation. Managed by Private Company. Facilities; Cold Storage, Food Safety Laboratory. Buyers grade products after purchasing.

- **Integrator Company**: To collect products from farmers or farmer groups. To manage supply consistency and quality control of collected products. They have capitals. They have basic contracts with Supermarkets and other high end buyers.

- **Agricultural Cooperatives**: Organized by member farmers. To provide member farmers with loan, inputs. Their involvement in collective marketing is very limited.

- **Local Wholesale Markets**: Managed by Ag-cooperatives or farmers groups. Facilities construction subsidized by MOAC (Cooperative Promotion Department) Free trading. No auction.
Market Changing in Philippines

Benguet is the largest production place for high land vegetables such as cabbage, lettuce, broccoli, Irish potato
In Philippines

Traditional Market
In La Trini Dad City, Benguet Province

Products
* Sentro Pamilihang Foundation is managing this market.
  - Member farmers consign their products to the Foundation to sell to buyers (wholesalers) from Manila.
  - The Foundation receives the products from farmers at the market and records the amount (number and weight) of each kind of products.
On behalf of the member farmers, the Foundation staff (selling agents) negotiate selling price with the buyers based on the other markets price on the same grade of products.

This is one face to one face negotiation, but could eliminate price manipulation by buyers.

Transaction Fee is 1PESO/kg (0.5PESO for the Foundation, 0.5PESO for deposit of farmers)

Transparency

Sold Price is indicated on this board after the negotiation.

The buyers pay the money at this box after the trade.

The farmers receive the proceeds at this box one day after the trade.

Ensured payment
JAEC Project (2017 - 2019)

JAEC Project Prospects

**Now**

- Only 16 members in the JAEC Group in La Trinidad, Benguet

**Future**

- More than 300 members in several groups in La Trinidad, Tublay, Buguais, Benguet *(Establish production Network)*

**Supply Consistency** is must

- Thursday Night transportation by Refer-Van
- Sell them Friday morning (Weekly Supply)

**Products**

- Limited number of Shops and Restaurants in Manila

**Products**

- Collection Center (BAPTC)

**Products**

- A lot of Shops and Restaurant, Big Supermarkets in Manila
Fresh Products Marketing in HCM and related area (Vietnam)

Lam Dong Province (2 million ton vegetable production)

Ag Coop; Members are around 20 big farmers.
PT; Phong Thuy private company holding sorting machines

POSSIBILITY OF CAMBODIAN RICE EXPORT

Potentials and Constrains

Daily Traded Price is indicated on this Board variety by variety.

Svay Antor Open Paddy Market
Open Paddy Market (OPM) in Cambodia

- Paddy was openly traded in the market by Farmers and Millers, Wholesalers.
- OPM management organization provided basic services for users such as farmers, millers.
  - Services: Loading & unloading, Weighing, Quality Check (Price Setting, Settlement for payment)
- OPM Optional Service: Threshing, Drying, Transporting, Cleaning, Storing, Paddy Mortgage Loan, Fertilizer Sale in accordance with users requests.
  - (Market Information Dissemination)

This could eliminate dishonest trading (cheating scale, putting stone inside bags)

Transparency and fair pricing

Similar markets are operated in Thailand.
It is likely that Smallholders will be excluded from food value chain under control of strong buyers in developing countries (This problem was raised by "The End of Foods" written by Paul Roberts).

Traditional Demand

High End Demand (Supermarkets: Strong Buyers)

Low functioned wholesale market

Smallholder Products

Consistent Supply

Inconsistent Supply

Big farmers products & imported products

Smallholders lose market
High End Demand could rely on functional Wholesale Markets by ensuring consistent & many kinds of supply.
# Functional Wholesale Market

## Five Functions

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1. Collecting Products</strong></td>
<td>To collect all kinds and quality grades of fresh commodities from all over the country and the world</td>
</tr>
<tr>
<td><strong>2. Dividing Products</strong></td>
<td>To provide the necessary amounts on all kinds of fresh products for buyers within short time.</td>
</tr>
<tr>
<td><strong>3. Price Formulation</strong></td>
<td>To set suitable price for each commodity through comparison between daily supply and demand at one point.</td>
</tr>
<tr>
<td><strong>4. Settlement (Sure Payment)</strong></td>
<td></td>
</tr>
<tr>
<td><strong>5. Collection and Dissemination of the information</strong></td>
<td></td>
</tr>
</tbody>
</table>
Appropriate Profit Allocation could be realized to some extent through Transparent Wholesale Market System in Japan.

These prices are decided after trading at WM.

- Price at Farm Gate
- JA (Middlemen)

Commission Rate of WM at 8.5% of proceeds.

Wholesale Price

Price at Collection Center

- Farmers
- Wholesaler in WM
- Auction
- Person to Person Trade
- Intermediate Wholesalers
- Retailers
- Consumers

Each PD could be calculated and clarified based on publicized price in WM.

Traded Price publicized

WM: Wholesale Market

PD: Price Difference
Each Kind of Commodity has its own grades in terms of size, quality, production place.

(Example)
Product: Cucumber
Size: LL, L, M, S, SS
Quality: Excellent, Good, Medium, Non-Standard
Place: JA Fukushima

Based on the above information, all stakeholders could know the actual grade of each kind of commodity nationwide.

The price of representative one become the target price of the commodity and formulate reasonable price for each grade nationwide.
Mechanism of Wholesale Market & Zen-NOH Distribution Center in Japan (Wholesale Market Law)

Farmers consign their products to JA and Wholesale Market to decide price. Farmers could receive their proceeds within one week.

Points to be discussed later

〇 Need to identify appropriate positions of Farmers Markets in agricultural products marketing (Not Lead Actors, but Supporting-Actors)

〇 Contract farming is one solution, but it cannot solve all marketing issues. (Most small farmers are outside contract farming)
Under current large flexibility of supermarkets, frequent cases of stock-out can be accepted by them. But in future this flexibility will be minimized.
Inconsistent supply by contract farming cannot be accepted by processors.

〇 Heavy reliance on FDI is difficult. They could cover export business mostly. Japanese Agricultural Corporations (JAC) activities could become models for high end value chain development, but only JACs cannot extend these models to wider areas covering small farmers.

〇 Most small farmers have to rely on wholesale markets with limited function. It is difficult for them to sell their products to high end markets and export.

・ How to strengthen collective marketing by small farmers groups (sale to domestic wholesale market or specific buyers)
・ How to establish consistent supply through networking among several groups (Uneven profit sharing between diligent farmers and lazy farmers)
THANK YOU FOR YOUR ATTENTION
